

# Specialisation

- Already present to some extent
  - Crop groups
  - National collections
  - Techniques: cryopreservation
- Centralisation more efficient, but still need multi-site evaluation, regeneration
- Division of tasks: safety duplication, different levels of databasing: better links between databases

# Central authority

- Coordination not dictatorship
- Central and stronger role of ECPGR
- Funding: 20 min discussion

# Redundancy

- Use passport data
- Molecular techniques expensive and not conclusive/suitable for certain species/sample types
- More effort in avoiding new redundancy

# Requirements

- Trust, openness, transparency
- Certification/QMS
- Needs time
- Small projects/pilot projects
  - Inspirational examples on website
- Logistic assistance from ECPGR
